ZF Services UK

ZF Services UK was chosen as one of our top exhibitors at Seawork International in 2019.

At the show, ZF Services UK announced expansion of its capacity to remanufacture and repair gearboxes for marine applications, covering everything from inland waterway and smaller pleasure craft up to wind farm support vessels. In response to a rise in market demand, the company's Nottingham-based repair centre has been developed to ensure customers further benefit from a complete range of support solutions from overhaul and remanufacture, to parts and technical support.

The expansion includes a dedicated gearbox repair and remanufacture work area, with additional technicians recruited to meet the increased demand, now trained to deliver ZF OEM standard transmission workshop repair and reman solutions. The centre also stocks and distributes genuine ZF parts, as well as providing a non-ZF gearbox remanufacture and reverse engineering service.

Field service support has also been boosted by the recent expansion, allowing more certified ZF trained technicians to carry out diagnosis, health checks and commissioning of gearboxes in many demanding, often extreme environments. ZF's comprehensive programme for service engineers sees them receive in-depth training across the year at ZF Services UK, including diagnosing problems and carrying out repairs on ZF Marine products.

For more information on ZF Services UK, Marine, please contact Paul Dean.

sales@vegware.co.uk

Eco packaging producer Vegware manufactures the widest range of compostable foodservice packaging - more than 350 products - and they're always innovating. Vegware invests thousands of pounds in new product development to keep customers at the cutting edge of foodservice.

See the full range at www.Vegware.com

Available in two sizes, these bags are perfect for pastries, bread rolls and baguettes and they're easy to seal with a Vegware-print compostable sticker. The bags are made from sustainably

Sustainable Packaging: Maximum PET recycling performance

January 2020, CCL Label created a sustainable TD sieve material enabling the packaging industry in meeting their recycling targets. This EcoFloat™ material complies with all CCL conformity standards and has been engineered to improve the sink/float separation process relating to PET bottles.

With high performing 360° sieves CCL offers design freedom and strong visual impact at the Point of Sale. Utilising the established expertise in the field of film manufacturing, CCL has developed a solution to support customers' sustainability targets with maximum cost efficiency.

"Meeting the Association of Plastic Recyclers (APR) standards in the US and the European PET Bottle Platform (EPBP) standards in Europe is becoming increasingly important," Mr. Fenkart (Head of R&D) stated. "EcoFloat™ was designed to meet economic and environmental sustainability goals while enhancing the look & feel of the product." Technical Features: - Clear polyolefin film material - Material floats with ink - Design Freedom with shrinkage up

to >60% - Softer touch, for squeeze-bottle applications - Certification by recycling APR/EPBP in process (Q1 2020) - Supports PET bottle-to-bottle recycling process

Sustainability is about more than just conservation; it also means being responsible corporate citizens while producing quality products. A key part of this process is working internally with employees and externally with partners to create more efficient and environmentally friendly options.

Hills Rotary Dryers – smart solutions for outdoor drying

It has been over 10 years since Freudenberg Household Products LP acquired the business for a range of outdoor rotary dryers from Hills Industries in Caerphilly and their European trademark for the Hills brand.

The range of outdoor rotary dryers offer a wide choice of clothes drying options which meet a variety of demanding criteria relating to space, durability and cost. All Hills outdoor dryers are manufactured from

durable galvanised steel to help prevent rusting allowing them to offer a guarantee against frame failure due to rust. All washing lines are phthalate-free, ensuring they meet the latest Health & Safety guidelines.

Hills Rotary Dryers, which was established over 70 years ago in Australia, has long been a firm favourite within the building trade, due to its quality, durability and performance. The brand is currently

stocked by builders' merchants including Travis Perkins, Toolbank, Jewsons, Decco, Stax and other independent hardware wholesalers and retailers.

Freudenberg's strong partnership with D F Sales, based in Gloucestershire, who distribute the Hills range of dryers as well as Freudenberg's leading brand Vileda, have established significant contracts within the building trade sector and are well placed to develop the brand further.

Freudenberg Household Products offer seven outdoor dryers in the Hills range, from the ultra heavy duty Supex Hoist and the Supadry Hoist to standard rotary dryers such as the Portadry and Airdry, with a choice of line lengths and sizes suitable for various outdoor spaces. Accessories are also available.

Photo-Me

Photo-Me International, continue to shake up the market with their 'Revolution' technology for 2020 - outdoor laundrettes with economic, commercial, and environmental benefits. Self-access machines are used in a growing number of areas (installed in various sites around the UK) including construction, retail, leisure and the public sector in universities as the latest technology for departments to procure.

The Revolution Compact and Compact S as operated by Photo-Me, are ideal for washing large or heavy loads such as duvets, blankets and pillows finishing in a record time of 30 minutes per cycle. The external laundrette service open 24/7 is the latest innovation in mass washing facilities contributing to a huge increase in footfall/ revenue for retail sites with environmental benefits too.

The Group operates approximately 47,000 (and growing) vending units across 18 countries, with further sites confirmed for 2020 operating the Revolution technology.
